Get the Edge!

Wire Belt's C-CureEdge® on your conveyor belts.

Want to increase safety and improve productivity in your facility? You need to put C-CureEdge belting...only from Wire Belt, on your conveyor. C-CureEdge's patented C-shaped end loops minimize the risk of accidents from sharp or burred open ends. C-CureEdge end loops won't tangle during shipment, storage, or installation. Have a tight conveyor-to-conveyor transfer? C-CureEdge won't snag or catch on another belt during operation or movement of equipment from one position to another.

Bottom line... this makes your facility safer, more productive, and more cost effective. C-CureEdge is available on most Flat-Flex® belts and comes standard on USDA Accepted CompactGrid™ conveyor belt.

C-CureEdge Flat-Flex style belting

C-CureEdge on CompactGrid style belting

C-CureEdge advantages

- Eliminates "zipper effect" tangling when un-rolling or re-rolling
- Patented design improves flexibility and reduces individual strand stress on the outside edge of the belt, extending belt life and lowering your total cost of ownership.
- Removes the chance of tangling during shipping, storage, and installation
- Diminishes opportunity for conveyor damage caused by end loop irregularities found in competitive belts
- Minimizes risk of accidents from sharp or burred open ends
- Reduces opportunity for conveyor-to-conveyor catching and tangling during transfers
- No conveyor modifications as it is a direct drop-in replacement for any Flat-Flex belt
- Works perfectly with our EZSplice® belt splicing system, for stronger and longer lasting belt joints
